

TrackEMS®

ESO is excited to introduce TrackEMS, the future of EMS communication. Watch us grow together!

TrackEMS is a customizable and user-programmable way for EMS professionals to securely and efficiently communicate with hospital emergency departments and cath labs.

GATHER CRITICAL DATA QUICKLY

TrackEMS eliminates time-consuming verbal reports so you can easily and accurately share data with hospitals. Plus, it's easy to use – you can capture data with TrackEMS' "one-touch" assessments.

CONFIGURABLE FOR YOUR NEEDS

Unlimited points of entry which can be configured to your local population and EMS/hospital protocols offer ultimate flexibility.

KNOW WHAT'S COMING

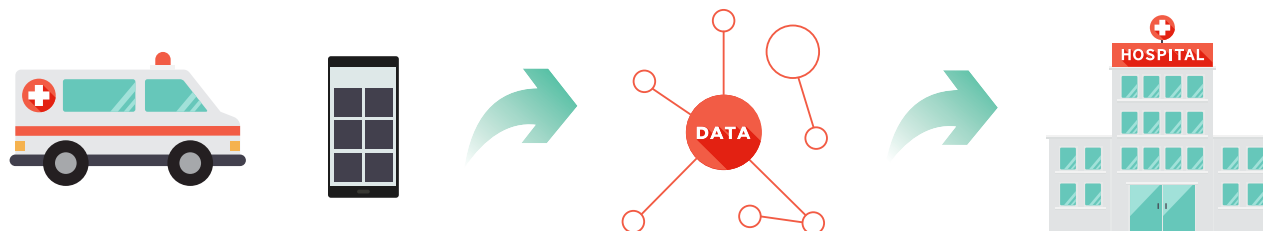

TrackEMS alerts ED personnel of case types and allows EMS to receive notifications of room assignments for their patients.

SECURE & COMPLIANT

TrackEMS provides HIPAA compliant, two-way communication for EMS and hospitals. You can wirelessly and securely transmit case summaries, including pictures and video, to the hospital.

EARLY NOTIFICATION EQUALS BETTER PREPARATION.

Improve the care of EMS transport patients with TrackEMS. Capture critical patient information at the scene, using smartphones and tablets, and wirelessly transmit data, photos and video to the Hospital ED to alert them of incoming EMS transports and help them prepare for cases before the patient arrives.
