

SEPSIS SCREENING

ESO EHR's Sepsis Screening Specialty Form helps you easily identify potential sepsis cases so you can sound the alarm and get your patients fast-tracked to care.

MULTIPLE METHODS, INSTANT RESULTS

The Sepsis Screening form lets you choose the methodology your agency uses for screening, including Quick Sepsis Organ Failure Assessment (qSOFA) and Systemic Inflammatory Response Syndrome (SIRS). Either choice provides you an instant result as to whether or not the criteria for a suspected sepsis case has been met.

TRACK SUSPECTED SEPSIS CASES IN ANALYTICS

Easily review primary impressions of sepsis in Analytics to track the number of cases. Pair with ESO Health Data Exchange (HDE) to reconcile the primary impression with the ICD-10 codes from the hospital to gain a clearer picture of sepsis identification tactics within your agency.

FROM A COMPANY YOU TRUST.

At ESO, we strive to improve health and safety through the power of data, and we believe arming those who protect our communities with the ability to obtain powerful, life-saving data is invaluable. Learn more at eso.com/ehr.

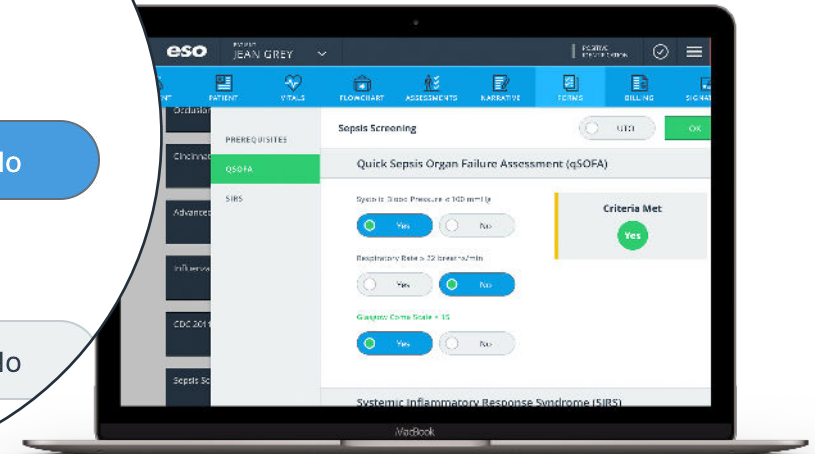

Systolic Blood Pressure \leq 100 mmHg
 Yes No
