PERMITS

**eso**

Bridge the gap between permit, inspection, and property records. ESO Permits joins forces with ESO Properties and Inspections to help you track and issue permits while showing how your department complies with local ordinances and records fee revenue.

Made for:

FIRE

TRACK PERMITS AND REPORT WITH EASE.

Analyze the types of permits you've issued, including their locations, so you can better understand where your department's efforts are focused and improve operational efficiencies.

GET A RUNDOWN OF EACH PROPERTY

Review which permits are on file for any Properties record. Quickly identify which properties have the required permits and what's allowed on each type of property.

PROPERTY PERMIT HISTORY

Reviewing permits previously filed for a property is straightforward and uncomplicated, allowing you to maintain detailed records across all of your properties.

PRIORITIZE WORK BY EXPIRATION DATE.

Find out which permits are expiring, and when, so you know which business needs to be inspected or properties to service first. It's easy to identify properties that need urgent attention so you can plan ahead.

BUILD YOUR OWN CHECKLISTS

Make sure your department follows appropriate permitting processes and procedures by creating configurable checklists. Keeping checklists helps you record and note what happened during any inspection performed by your team.

CREATE PERMITS WHEN AND WHERE YOU NEED THEM

Add a permit to an Inspections record, issue a permit for an event, and manage permit requests. Plus, you can easily print or email the permit in a displayable format when you're finished.
