

ACTIVITIES

ESO Activities helps you tell the story of how your agency spends its time on community events and operational tasks, allowing you to show your value in the community.

Made for:

EMS

MANAGE CALIBRATION AND TESTING SCHEDULES

Set the schedule for calibrating equipment, running tests, or maintenance tasks to ensure equipment, fleet, and facilities are safe and ready for use.

WRITE POWERFUL GRANT PROPOSALS

Use reporting features to pull key data during the grant-writing process. Whether you need funding for equipment or to develop new community programs, you'll find all the data necessary to state your case.

CUSTOMIZE YOUR STATION'S TASKS

Enter your to-do list to create automated daily task lists and station logs based on your needs. You'll no longer wonder what's completed and what's still left to do from one shift to the next.

TRACK NON-RESPONSE ACTIVITIES

Do you know everything that happened at your station today? Activities captures what's going on when you're not responding to calls, so you get the full picture of how your team spends their time.

SHOW YOUR IMPACT

Paint a picture of how you're making an impact on the people you serve by tracking community outreach hours, like car safety checks, CPR training, and more. Track your presence in the community by capturing community visits and non-emergency events.

SET IT AND FORGET IT

Say goodbye to writing the same to-do list every day by creating recurring tasks. Reporting on recurring tasks over time is more consistent and reliable and allows you to report on what is being completed at the station and what needs to be done.
