

HEALTH DATA EXCHANGE

ESO Health Data Exchange (HDE) delivers bidirectional data sharing between EMS and receiving sites. True data interoperability is here.

Made for:

HOSPITALS

FOSTER EMS PARTNERSHIPS.

Build a stronger partnership with EMS agencies by sharing outcome data to support education, quality reviews and research.

IMPROVE OUTCOMES.

Enable quality managers to bring together EMS and hospital system performance data, making it easier than ever to do system quality improvement — and study the entire care continuum.

SPECIALTY ACCREDITATION.

Rapid access to EMS data elements required for stroke, STEMI, Trauma, and other accreditations.

GAIN BUSINESS INTELLIGENCE.

Identify volume by service line and EMS agency and review referral patterns. Develop core metrics for reporting and extract trends over time to improve operations.

BEDSIDE DATA AVAILABLE FOR CLINICAL CARE.

Within minutes of EMS completing their patient care report, out-of-hospital data is available in the receiving medical record to assist clinicians caring for patients.

A PROVEN TRACK RECORD.

Over 3,000 daily bidirectional data exchanges, with the option to receive discrete EMS data elements such as total fluids administered for sepsis patients, time of initial EKG for STEMI, and scene time for trauma.
