

# ESO INSIGHTS

ESO Insights provides a single reporting experience allowing you to explore, analyze, and build custom Dashboards. In ESO Insights, users can access their ESO Analytics reports in addition to a vast pre-built library of dashboard-style reports and includes options for customization and sharing. This allows for maximum oversight and efficiency to create actionable data for both teams and individuals.

Made for:

EMS

FIRE

HOSPITAL

STATE

## EMAIL AND SHARE DASHBOARDS

Because data is best when shared, we've made it easy to do. Schedule encrypted HIPAA compliant emails, and share dashboards within your organization in one convenient location. Set Dashboards to run by day, month, and time with the flexible Dashboard scheduler. Full-screen options are also easily accessible for meetings or presentations.

## SELF-SERVICE REPORT DESIGNER

Create custom Dashboards with access to all collected data product fields. You decide what data you need and how you want to see it. With a full library of ESO curated Dashboards created by our team of subject matter experts you have the baseline you need to get started. You are in control of easy modification to get the data you need.

## ACCESSIBLE USER INTERFACE

Organizations can make quick adjustments to configurable elements, add and configure data, and manage user access without relying on ESO Support to facilitate changes

## PRE-BUILT CALCULATION LIBRARY

We have taken all of the KPI's of ESO Analytics and built Dashboards that you can use right out of the box. You can easily add and remove filters to drill down to individual records or expand different variables to obtain the information you want.

## MULTI-PANEL DASHBOARDS

Visualize your data from multiple perspectives using drag and drop Widgets on a single dashboard. Change or create data filters to slice and highlight to better analyze your data.

## FAST, SCALABLE BACKEND

Whether you are working at 9 am or 1 am, your data can be accessed quickly. No lag or endless upload times dependent on the number of active users. Your data, when you need it.

## USE ESO INSIGHTS FOR NEAR REAL-TIME REPORTING

Use ESO Insights to design reports and Dashboards, calculate custom metrics, and enabling program leaders to make near real-time, data-informed adjustments to improve program performance and patient outcomes.

With ESO Insights programs can easily compare performance with national risk-adjusted benchmarks from TQIP, NTDB, NEMESIS, and other national or state-specific quality collaboratives and accrediting bodies.

## WHY SaaS?

Software as a Service (SaaS) is a way of delivering a software product over the internet, eliminating the need for initial installation and downtime when updates and patches are deployed. SaaS products also do not require expensive hardware like servers and associated maintenance.

Our SaaS technology is housed in a secure, SOC 2-compliant environment. Automatically deployed patches and data dictionary updates ensure programs are always using the most up-to-date software while experiencing minimal downtime. And data are stored securely in a virtual environment, eliminating the need for costly servers that require maintenance. The only thing needed to use the software is an HTML5-compliant browser and an internet connection.
