ESO LOGIS BILLING

Made for **EMS**

Pre-Bill Assist

Less time in payor portals. More claims moving forward.

Pre-Bill Assist for ESO Logis Billing verifies patient eligibility across payor portals – including those with no EDI or clearinghouse connection. An AI agent handles each lookup in the background, so your team no longer has to manually verify eligibility across dozens of payor websites. They simply review the results the agent has already gathered.

Hours reclaimed, every day

Runs in the background all day, so high-volume periods no longer bury your team in manual work.

Catch issues before a claim

Eligibility is verified and discrepancies are flagged before a claim is created – not after it's rejected

Control stays with your team

Uncertain matches are escalated to your team, keeping human judgment at the center of the workflow.

Wider payor coverage

Verifies through the payor portal itself, reaching more payors than solutions that rely on clearinghouses or direct-EDI connections.

THE CHALLENGE

Pre-Bill staff must log in to payor portals one patient at a time – a slow, unscalable process. Manual entry errors create unclean claims, rework, and slower reimbursement.

WITH PRE-BILL ASSIST

- Reduced time spent on manual verification
- Reduced human error
- More discrepancies caught prior to claim
- Lower verification costs
- Reduced time to reimbursement
